

paediatric endocrine research grants

The APEC Research Grants were established in 2007 to support and advance clinical research in the fields of Paediatric Endocrinology Care. The program has been designed to promote excellence in medical research throughout Australasia. It seeks to encourage and help develop the best of our young clinical researchers and extend Pfizer Australia's already notable commitment and contribution to medicine and the health of our community.

Pfizer Australia will allocate AUD\$150,000 per annum to this initiative as part of our continued commitment to Paediatric Endocrinology research. This research grants program is open to medical graduates who have obtained specialist qualifications within the last five years, or are currently in advanced training. Individual grants will be available up to AUD\$55,000 (including GST). Each grant is for a period of 12 months.

Applications are welcome from medical graduates who are currently residing, working, and conducting research within Australasia. Grant recipients must conduct the majority of the research project within Australasia. All applications are reviewed initially by two independent expert referees. The final decision is then made by the Australian Physicians Independent Committee (APIC) composed of 5 leading specialists.
